1	Introduction	3
2	Digital Literacy Awareness Infographic	4
3	Digital Portfolio	5
4	Coding & Collaboration Platforms	6
5	Professional Email & Etiquette Guide	7
6	Cybercrime Awareness Case Study & Prevention Guide	8
7	Conclusion	9
8	References	10

Introduction

In today's technology driven world, digital skills are essential for academic success, professional growth and responsible online participation. This course is designed to build a strong foundation in digital literacy by combining practical activities with realworld applications. Each task focuses on a specific aspect of digital competence ranging from understanding core concepts and building an online presence to practicing coding, collaborating using cloud tools and maintaining professional communication.

The tasks also emphasize awareness and responsibility, particularly in areas like email etiquette, social media behavior and cyber safety. By engaging in hands on activities such as creating an infographic, developing a digital portfolio, solving coding challenges, and designing awareness resources, students not only learn theoretical concepts but also apply them in meaningful ways.

Overall the course aims to transform students into informed, skilled and responsible digital citizens who can confidently navigate both academic and professional digital environments.

Task 1 - Digital Literacy Awareness Infographic

For this project, I used **Canva**, an online graphic design tool that offers a wide range of templates, icons and customization options. Canva made it easy to arrange elements neatly and experiment with colours, fonts and layouts without needing advanced design skills.

My design focuses on the theme of email etiquette and professional online presence. It includes visual elements such as icons, headings, and short text sections to explain the importance of writing clear emails, maintaining respectful communication and following proper digital behaviour.

One thing I found interesting while making this project was how small design choices like font style, colour combinations, and spacing ,can greatly affect how the information is understood. However I also found it a bit difficult to balance text and visuals so that the design was not too crowded but still informative.

Overall the experience helped me improve both my creativity and my understanding of effective communication.

Task 2 - Digital Portfolio

For my professional and academic growth I have chosen three key platforms: **GitHub**, **LinkedIn**, and **Kaggle**.

GitHub is mainly used for hosting and managing code. It allows me to store my projects, collaborate with others and track my progress over time. I plan to regularly upload my coding projects, contribute to open-source repositories and build a strong portfolio over the next four years.

LinkedIn is used for professional networking and personal branding. It helps me connect with industry professionals, showcase my achievements and explore job opportunities. I intend to keep my profile updated, share my work and engage with relevant content to expand my professional network.

Kaggle is focused on data science and machine learning. It provides datasets, competitions and learning resources. I plan to participate in competitions, practice real-world problems, and improve my analytical skills. Over the next four years these platforms will help me develop technical expertise, gain exposure and prepare for a successful career.

Task 3 - Explore Coding & Collaboration Platforms

For this project, I used **Google Forms** and **Google Sheets** as my main platforms. I created a quiz using Google Forms, which allowed me to design different types of questions such as multiple choice and short answers. It was easy to customize the form, add required fields and share it with others for responses. After collecting the responses I used Google Sheets to view and analyze the data. The responses were automatically organized into a spreadsheet, making it simple to sort, filter and interpret the results.

Through this activity I practised creating digital forms, managing data and performing basic data analysis. I also learned how to present information in a structured and clear format. These tools will help me academically by improving my ability to conduct surveys, organize information and analyze data efficiently. In the future I can use them for research projects, assignments and group work making my tasks more organized and professional.

Task 4 - Professional Email & Etiquette Guide

A common example of poor digital communication causing problems is when employees misinterpret tone in emails. Imagine a manager sending a brief message like, “Finish this by today,” without context or polite phrasing. The employee might perceive it as rude or urgent, leading to stress or resentment, even if the manager simply intended efficiency. This miscommunication can harm workplace relationships and reduce productivity.

To avoid such issues, the manager could have added clarity and tone, such as, Please try to complete this by today if possible. Let me know if you need help. Using polite language, clear expectations and even emojis or formatting in informal settings can improve understanding. Choosing the right medium like a quick call for urgent tasks also helps prevent confusion and ensures effective communication.

Task 5 - Cybercrime Awareness Case Study & Prevention Guide

While researching cybercrime, what surprised me the most was how simple mistakes—like sharing an OTP or clicking on a suspicious link—can lead to serious financial loss within seconds. I learned that many scams, especially UPI frauds, rely more on psychological manipulation than technical hacking. This made me realize how important awareness and alertness are in staying safe online.

One habit I will personally change is being more cautious while handling payment requests and links. Earlier, I might have quickly clicked on links or approved requests without checking details carefully. Now, I will always verify the source, double-check UPI requests, and avoid responding to unknown messages. This small change can significantly reduce the risk of becoming a victim of cyber fraud.

Conclusion

After analyzing and completing the five tasks it is clear that the course provides a comprehensive approach to developing essential digital skills. Each module builds on a different competency: creative communication, professional identity, technical practice, formal communication and cybersecurity awareness ensuring a well rounded learning experience.

The practical nature of the tasks encourages active learning and helps bridge the gap between theory and real world application. From creating a digital portfolio to understanding online threats, the course equips students with tools and habits that are crucial for long-term success. Additionally it promotes responsible digital behavior, which is increasingly important in an interconnected world.

Overall this course not only enhances technical and professional skills but also fosters confidence and awareness, preparing students to become effective Digital Ambassadors and responsible users of technology in their academic and future careers.
